The file encad-inc-117.51.0.1-x64-clk-en-3-2.zip is a free information for encad inc 117.51.0.1. We are not provide any software download from encad-inc-117.51.0.1-x64-clk-en-3-2.zip but we provides source of software from free file hosting service.Q: How to read integers in a text file with python I have a text file in the following format: [the name]|[number] I need to read the first character, then read the name and the number (in a tuple) from it. My code so far is: infile = open("raw.txt", "r") for line in infile: line = line.strip() if line.startswith("[name]"): name = line.split("|")[1] print name elif line.startswith("[number]"): number = line.split("|")[1] print number else: print line But this isn't giving me what I want. The problem is that I need to extract the number before printing the name. Any suggestions? Edit: Thank you so much for your answers, they have been really helpful. A: You can try this: infile = open("raw.txt", "r") for line in infile: name,number = line.split("|",1) print name, number A: This should do it: import re with open('raw.txt') as f: for line in f: line = line.strip() if line.startswith("[name]"): name = line.split("|")[1] elif line.startswith("[number]"):
