. QuickReport Professional v5.05 for Delphi XE2.rar.116 I don't know if it's because I'm not using the standard installation, but I can't get this version of Delphi to build in my installation. It just says: Error: C1076: Delphi Seattle Tooling (SDK) cannot be found. Make sure that the SDK has been installed. Make sure that the SDK path is defined correctly in the [DelphiSDK] section of the Project Options. The only information I have on this section is that it says, "Delphi Seattle Tooling (SDK) cannot be found. Make sure that the SDK has been installed." My solution is to add the delphi_2010_3\sdk to the platform_specific\common\sdk\Windows directory. After doing so, when I rebuild my Delphi installation, I get the same error. I am using Visual Studio 2008. A: There is one critical thing to remember when installing these updates: Make sure that the [DelphiSDK] section of the Project Options says: Delphi Seattle Tooling (SDK) C:\Program Files (x86)\Embarcadero\RAD Studio\9.0\bin\release\ This means that if you installed RAD Studio 9.0, the path should be: C:\Program Files (x86)\Embarcadero\RAD Studio\9.0\bin\release\ If you installed RAD Studio 9.1, the path should be: C:\Program Files (x86)\Embarcadero\RAD Studio\9.1\bin\release\ Since the SDK is in a folder called "r76" (r=release, 76=9.1), it is an important thing to ensure you update the path as this value will be different. In the latest version of Delphi, the sdk folder is simply referred to as "sdk". A: I was having the same problem. Updating the sdk path in the Project Options fixed it for me.
