Root does not use any method of communication to transmit information between

applications and is completely self-contained, which means that there are no dependencies between files or data. Version Root has been tested and confirmed to work with the latest version of Windows. Root's size is small enough to be installed on any computer that runs Windows. Root is designed to be portable – it is highly unlikely that you would need to move Root from one computer to another.

Root can be installed and used in a protected environment to ensure that its data and programs cannot be altered. ROOT.INI File ROOT.INI is the basic configuration file for Root.
