What's New in the Fly DVD Copier?

Fly DVD Copier is a program with a pretty explicit title - it allows you to backup your DVDs and you can do this in a user-friendly environment. The interface of the application is based on a small window in which you don't have too many options at your disposal. You can import a DVD via the file browser only, since the "drag and drop" method is not supported (and neither is batch processing). So, after you specify the output location (ISO file or disc) and copy mode (full disc, main movie or custom), you can proceed with the encoding process. Additionally, you can enable Fly DVD Copier to automatically turn off the computer once the task is completed. If you select the custom copy mode, then you can select the audio and subtitle stream. But you can also preview the DVD and export the log file, as well as go to the "Config" area to set the tool to always ignore read errors, keep the DVD menu while splitting, rename the ISO volume, keep the region code, add a password to your copied DVD, allow sound events, and others. The DVD copying program requires a low-to-moderate amount of system resources, quickly finishes a task and manages to keep a very good image and sound quality. No errors have occurred during our tests and Fly DVD Copier did not freeze or crash. We weren't able to access the help file, though (clicking the option didn't do anything). Nevertheless, we strongly recommend Fly DVD Copier to all users, regardless of their experience level.
