The study also found that AutoCAD is more intuitive than ArcView, and the abilities to define, edit and view a map can be attained faster than other GIS software products. AutoCAD is being used as a tool to analyze uses of the internal combustion engine. AutoCAD in combination with a geographic information system and statistical analysis was used to identify places where an industry or place of use is most feasible in terms of cost and performance. Scripting In AutoCAD, developers are allowed to create their own tools or add-on programs that perform tasks without using the user interface. These tools are called plugins. The user interface is considered a separate application from the plugin. There are two categories of AutoCAD plugins: Autodesk Exchange Apps Use of the plugin-based architecture is not limited to AutoCAD, but is applied to other Autodesk applications.
