Integrated Functionality: To Axis Inventory Manager is a powerful and easy to use

What's New In Axis Inventory Manager?

Axis Inventory Manager (IM) is a powerful and easy to use inventory control application enhanced with additional features usually only found in larger ERP/MPR system. When you need more than basic inventory software but dont want the bother and associated running costs of an oversized ERP/MRP system take your free trial and see for yourself. Because of its extremely low price and shareware distribution methods, Inventory Manager might at first appear to be targeted primarily at smaller businesses. In a way this is true because smaller businesses usually operate on a tight budget but in fact Cymruco Inventory Manager is an ideal tool for any company, large or small, which doesnt wish to operate a complex, oversized, MRP system when all they really want is the ability to manage inventory, vendors, customers, purchases, sales orders and Invoicing. Cymruco Inventory Manager may look like a small package but thats because it doesnt waste space on rarely used features that nobody uses anyway. Features : Axis Inventory Manager has many powerful features and functions that you will find in a standard ERP system. Inventory Manager incorporates the following features: * A powerful open database design where the SQL is simple, easy and free of vendor lock in. * Complete Inventory Control including stock management, invoicing, posting to customers, purchasing, purchase order, sales order management, batch processing, batch posting, automatic posting to vendors and suppliers. * Complete order and sales management including customer, order and sales entry, invoicing, purchase order and sales order entry, supplier and vendor relations and batch processing. * Client driven order management including quick order entry (1 minute), easy posting to customers and vendors. * Client interface for top level management and order entry. * Client Interface for entire order entry. * Client interface for inventory, invoicing, purchase, sales and purchase orders. * Client interface for all reports and graph sheets. * Client interface for bar code scanning. * Client interface for lot tracking and inspection management. * Client interface for batch postings. * Client interface for changes processing. * Client interface for inventory warehousing and transportation management. * Client interface for vendor and invoice status monitoring. * Client interface for price and lot management. * Client interface for bulk posting and vendor posting. * Client interface for purchase order and sales order printing. * Client interface for batch processing. * Client interface for user profile management. * Client interface for unit pricing and pricing group management. * Client interface for customer and supplier screen management. * Client interface for purchase requisition and sales requisition. * Client interface for purchase order generation. * Client interface for invoice revision management. * Client interface for shipping report and shipment view. * Client interface for lot upload. * Client interface for lot removal. * Client interface for bar code scanning. * Client interface for lot tracking and
