? The game introduces an array of motion control enhancements, including: Real-life Player Animation: Using motion capture data, FIFA 22's in-game player models animate more naturally with the visual and aural details of the real-life version. HyperMotion: Connecting the game to the player's real-life data allows for more realistic attacking behaviours including dribbling, shooting, crossing and more. Ultimate Team: Now with the ability to create custom-made Ultimate Team players from original real-life motion capture data, fans will be able to see and play real-life versions of their favourite players in the game. Player Paths: Moves and techniques that players performed in real-life will be used to create player animations in the game. These will augment authentic player models to create an even more immersive experience. FIFA The Journey: New animations for players that create a deeper connection to their journey to stardom, while the engine also now tracks ball speed, direction and spin to create more realistic movement. Sound: Additionally, for the first time ever in a FIFA game, the sounds of players' feet, ball and collisions can now be heard in the commentary. Visuals: Including an all-new High Definition Player model that is more than 30 per cent slimmer than in FIFA 21. Features Key:

- New "HyperMotion" Physics - Set in motion.
- "Team of the Year" - Compare to the best in the world.
- Classic ball control-based passing. Read and execute with complete accuracy of ball parry and pass. Replay clear you goal in the middle, get the ball deep or glide a throw pass with a simple flick.
- Pro-controller functionality to simulate direct free kicks, goal kicks, and player reactions. Make precise pitches or let fly with the the rasp of close control passing.
- Improves lighting and shadows, with more varied textures and surface complexities at the speeds you're at. Breathing life into the pitch and player action.
- Camera work, in-game player vision, improved player weighting, throwing, and goal kicks. Looking more in-game and sure to give the casual player something to up and grab.
- New situational animation used when players are open, close, stand, stride and physically interact with the ball. These new moves add a more vivid quality to life on the pitch.
- We have a 10 second dribbling animation which incorporated fast footwork, heavy base, and pressure on the ball to a maximum extent. Players other than Lionel Messi do have pressure applied while pressing, without overburdening the stamina that comes with being Messi.
- Improved animations on passes. Particularly low percentage, and long range passes with the body motion in the body and feet that we've looked at all the way from initiator follow up, defender shifts, as striker on off-side, cut to feet, and long bending passes.
- Showtime Pass animations - We have added all of the hidden pass animations when performing trick plays. Over 50 different animations, including fake passes, back post passes, and through balls for a total of 250 passes. They are also smart, generating a subtle block from opposing defenders and more realistic damage from defenders. Defenders attempt fake passes, jump for balls, use narrow windows to attempt a shot on goal, shift to attempt a tackle, finally sliding over to try and block a pass. Balancing out with a neat and subtle animation panel, as even with all the tools players have at their disposal, they need to master their tools to move a ball, not making it impossibly smooth

The flagship innovations from FIFA 20 are the introduction of coaching AI and the revolutionary Goal Line technology, but other features that are already being used by the world's best players are being implemented for the first time in an official FIFA game. Plus, FIFA's most popular video game mode, Ultimate Team™ (UT) has a new structure and connection to the game's updated player progression system, allowing players to upgrade, customize, and trade in-game items. Finally, the entire playing experience has been upgraded for a more authentic experience, including smoother graphics, better lighting, and more realistic crowds. *Estimated by Nintendo Co., Ltd. (April 2017) FIFA is for fans, not players Powered by EA SPORTS, FIFA is the only video game that's for fans, not players. With over 700 licensed national teams, more than 30,000 players and coaches, and more than 18 million customizable players in FIFA Ultimate Team, you get a real-world game experience unlike any other sports title. The FIFA team is made up of dedicated gamers with a deep passion for the game, who spend hours a day working on new features, adding new content and improving the overall experience. We spend months upon months before each edition begins working to ensure that the game is as realistic as possible. In order to put a world-class game in the hands of our fans, we're making the first-person experience even better than ever before in more ways than we can count. The content of the game is just as important as the features. The strength of the game boils down to the number of player licenses available at launch. What's new:

- **New Player Ratings (how much change/improvement has been made in each stat compared to the old version?).**
- **Customizable Team Styles (distinguishing your team to your squad. This can become incredibly costly to achieve, but it's a cool feature (especially if you're with EA?)).**
- **New Gameplay items. Shoot out of the blocks from any angle and weather the impact with sensational full-on tackles and aerial duels and recover after a wobble with unbeatable balance controls. It's never been easier to score a headed goal. Enjoy epic set pieces and send your opponents the wrong way with deadly free kicks. When these explosive attacks aren't enough, bombard your unsuspecting opponents with a deluge of goal-scoring crosses and panenka volleys. And never take your eye off the ball (or the opposition player it touches) as your crossed balls and airborne balls have the same capabilities to end in the back of the net.**
- **New team tactics. Choose from three new, star-inspired teams, switching between a 4-3-3, 4-2-3-1 or diamond formation.**
- **Improved handling. An enhanced hand-to-eye coordination system makes dribbling a much smoother and more accurate process. When playing with a regular controller, move the right stick in any direction to guide the ball where you want it to go.**
- **Improved passing. An improved ball control and finishing system allows players to more easily score and to occasionally pass the ball into a small passing window created by the opposition. Improved short-range passing controls have been added for fingertip passing precision and with the enhanced dribbling system, players can now pass while moving at pace.**
- **Enhanced dribbling. Pass, turn and shoot - all at the same time. Manipulate the ball with an improved dribbling system that gives you more control over the ball**
- **Improved physical details. FIFA 22 delivers more accurate ball physics, resulting in shots from all distances which curve and round off as they reach the goal. Player movement has been significantly improved, with a new Exertion Engine delivering more realistic player control and touch. Finally, avoid the opposition when tackling thanks to improved veracity that allows you to stop plays early.**
- **New commentary. Five new commentators (Jason Bell,**
