What's new in Fifa 22:

- **Dynamic Tactics - Deploy the best possible formation based on overall team performance, formation stability (its ability to maintain its chosen formation without reverting to another in response to specific situations), and individual player performance.**
- **Increased Team Tempo - A game engine-based system has been developed to accelerate the transitions between situations. The situation latency (or time before a reaction to a sudden change in the game) when a player touches the ball has been removed to decrease the number of game lags, making faster transitions possible.**
- **Improved Crossing - Moves away from up-the-leg play, instead favouring short or sideways crosses. The player's first touch has also been improved.**
- **Ball Possession - More stability, accuracy and tension have been added to the player's ball-controlled dribble, with more complex, subtle dribbling patterns. The player controls the ball with greater precision, and its path can change direction when dribbling within or towards the defence.**
- **Higher-accuracy Controls - Improved ball control and player rotations for closer control of the ball, a variety of goal celebrations and reactions, improved animations for defender's tackle and goal scoring animations, goalkeepers' reactions, and the Elite Referee's responses.**
- **Fully-interactive Goalkeeper - Goalkeepers show increasingly less open-side vision for up to 15 seconds after they both close and open their limbs. If the goalkeeper manages to gain possession of the ball, they will demonstrate exaggerated rushes of despair.**
- **Fully-interactive Defenders - Defenders demonstrate exaggerated lunges and moves towards the ball when receiving passes and showing strong hand-eye coordination. They respond to passes based on how they perceive the situation and their positioning.**

-
- **Stronger A.I. Defends** - The Defends react better to interceptions, clearing the ball, and recovering the ball.
 - **Improved Freekicks** - Defenders react faster in-flight, and more accurately in the air, when receiving free kicks. The goalkeepers' positioning has been improved too.
 - **Wide FreeKicks** - Ability to move with the opponent during breaks
 - **Stability** - Minor changes to pass animations for ball control with the full body, from make and receive to recover the ball.
 - **Improved Aerial Stamina**
