Why Does Photoshop Matter? The image editing power of Photoshop is legendary and has been around for decades. The program has been used by professionals for years, despite the relatively simple nature of its user interface. The interface is also relatively simple to learn, making it a great tool for photographers, who often edit photos in Photoshop. The program's usefulness is determined by the depth of features and the volume of tutorials available. It's difficult to recommend a beginner Photoshop user over the Apple Aperture, Apple iPhoto or Apple Photoshop CS or Lightroom tools, but we do recommend beginners to start with the free public version of Photoshop and continue with the paid version if their needs evolve. There are many great online tutorials, such as the one from the Adobe Knowledge Base, that walk you through everything from simple editing to complex features. We've also written a tutorial of our own that walks you through the basics of using Photoshop as well as sharing with others the workflow you adopt to achieve finished, unique images. What You Will Need to Learn Photoshop There are no restrictions on what you can do in Photoshop; there is no such thing as a tool that is available only to professionals. This is a good thing, because it allows you to experiment with new ideas and begin to explore your newfound artistic or creative vision. So, what will you need to learn to use Photoshop effectively? You'll need to learn some basic terminology and navigation skills for the most part. Here is a brief overview of what you'll need to learn. Understanding the Adobe Photoshop Interface There are four main areas of operation on the Photoshop interface. The Navigation Bar The Menu Bar The Layers Panel The Adjustments Panel The Navigation Bar The navigation bar is the top area of the Photoshop workspace. It contains the most basic of tools, such as a new document button, to its left; Undo, to its right, and the big purple plus button, in the center, that lets you create and use layers. Tip The Undo button is not a change in software, but rather a means of reversing changes made to an image in the previous step. On the far right, you'll find a drop-down menu with a number of preset buttons for very common editing functions. The buttons include: Crop Rotate Duplicate Trash Clone These basic

If you don't have Photoshop Elements or have used it before, you may need to familiarize yourself with the software before starting. The essential features are quite similar to Adobe Photoshop. These tutorials will help you learn Photoshop Elements just in time for the best times of the year: summer wedding season. Equipment A DSLR camera with an SLR lens Wedding photography is all about creativity. It's not about only getting the best photos for your wedding album. Every wedding photographer can make amazing wedding photos, no matter the equipment, if they put their best foot forward. When a photographer uses the correct setup with the best-calibrated lenses, and uses the perfect settings for a certain type of photo, they will have the best-quality photos. Another important thing to keep in mind is: setting up your camera correctly. The Wedding 05a79cecff

Slideshow ( 5 images ) OTTAWA (Reuters) - Canada's main opposition party on Sunday said it backed foreign aid to refugees and migrants stranded at the border, but would call for a meeting with the government to discuss the issue. The Conservatives, who hold a majority in parliament but have been struggling to govern since an Oct. 21 election, said in a statement the meeting would take place later in the week. "(P)eople come to our country seeking freedom, opportunity and safety. We have the moral responsibility to help them, and to remain a beacon of hope to those whose paths we block," said Conservative immigration critic Michelle Rempel, adding the government has not provided an accurate picture of how many people have arrived at Canada's border in the last two months.AN/TPS-76 The AN/TPS-76 is a passive electronically scanned radar (PESA) system developed by the United States Army and manufactured by Raytheon. It is used on various M1 Abrams variants. The system is used by both sides in the Israeli-Palestinian conflict as a 'threat point' and 'border threat radar', the Gaza Strip-based Iron Dome anti-missile system is the best known weapon system using the AN/TPS-76 radar as its target detection system. It was first introduced in the M1A2 Abrams in 1992, with further upgrades later, like the M1A2SEP (in 1999), M1A2S1 (in 2001), and M1A2S2 (with the improved TPS-76C)(in 2004). History Development of the system started in 1989, when the United States Army contracted Raymond Engineering of RIchardton, Massachusetts, who developed a 40 kHz passive electronically scanned array (PESA) radar, which was tested in live-fire. The test was a success. In 1990, the Army awarded the Electronic Systems Division of RIchardton the contract for further development of the system and its integration into the Abrams main battle tank. The system was mounted on an ARDEC Alvis AC6. In 1992, the Army approved the first prototype of the system, designated Block I. In 1994, the system was officially designated TPS-76. In 1996, the system entered full production, and was first fielded with the M1A1 Abrams. In January 1999, the system was upgraded and designated TPS

### What's New In?

Dadwalkers' Blog 6/16/2016 If you're like us, you probably have a lot of cool Halloween costume ideas you'd like to make. One great tip on how to get started was posted in our Pinterest boards by a dad who is a self-proclaimed sewing master: 1) Buy up a couple of yards of some wide ribbon or elastic-like material. Look for patterns that are perforated so you can cut them into strips or you can buy perforated ones. 2) Now, you'll need to pick a design for your "outfit". If you're really good and your pattern design skills are great, you could use that same design (but maybe with different colors) for your jacket, pants, shirt, skirt, belt, etc. 3) You'll also need a sewing machine. We used a Bernina 303, which we bought new in 2006. It has a built-in rewinder, a stitch adjuster dial, built-in drop feed, free motion, etc. It is a great machine, but if you're not sure about a sewing machine, you can also buy a cheapo one on Amazon or eBay. We went to Michael's and bought the following items: 1) thread 2) sewing machine stuff (fuse tape, pliers, thimble, needles, cutting mat) 3) thread for making buttons 4) a stencil to cut on the cotton fabric 5) fabric 6) ribbon 7) some cute old toys you don't really need, like a toilet paper holder, toy parachute, rattle, balloons, or anything that would make a good prop 8) a gift card or gift money 9) scissors 10) Sharpie markers, or any permanent markers if you want a stained look. This is what we made: Step 1: Use the stencil to trace the pattern onto fabric. We used Magic Marker. To make it look stained, rub it in with the Sharpie marker or any other permanent marker. Step 2: Sew the fabric together (the pattern pieces will come together in front and the side pieces). The side pieces are basically the back panels of the jacket. You can leave the front and back pattern pieces separate if you want to piece them together after the costume
