combination with physical modelling) it is possible to understand the bulk of the factors which affect the quality of the production process. The first book published by an Indian. Re-Tie Your Scarf! I love to be able to take an outfit from day to night (or from sport to evening!) with a change of accessories. The scarf was a must-have item for fall and winter and I found my newest favorite from Lululemon.

Lying flat across the back, instead of hooked, it looks very chic in a variety of styles and colorways. All the models and editorial content contained within this website are copyright to their respective rights holders. Some content presented within is not owned by us and we have made

In the present study, a comparison was made between the reported acceptability of a non-keratinised soft diet and the actual ad libitum intake. The experiment involved 95 healthy volunteers aged from 19 to 69 years in both sexes.

Subjects were fed a non-keratinised, soft diet for 5 days. They had reported their acceptability of the diet on a daily basis. The daily intake was recorded at 4-h intervals. The subjects were then fed a normal diet for 2 days. During the two dietary periods, 72 reports were collected. The intake of each day and the mean values (standard deviations) recorded for the 5 days of the soft diet and the 2 days of the normal diet were as follows: mean (SD), 36.3 (3.7) and 77.3 (7.4) g, respectively. The acceptability of the soft diet was significantly (P
