- Returns codes of any length.
- Types your chat name in the required format.
- Automatically returns names that match.
- Stores all codes it sees.
- Minimizes to task tray.
- Easily recognized by its distinctive icon, and its tight, dark blue theme.
- When minimized it shows a tray icon.
- When running you see a message stating the program is running.
- When minimized and backgrounded, the program still runs, and the message disappears.

Clicking the tray icon brings the application to the foreground. - Clicking again minimizes it back to the tray. - Completely customizable by user. - Can be configured so that it outputs to console. - You can configure Code Squire to use Voodoo's auto-complete, or not. - Can be configured to report the channel and message in which a given code was found. - Can be configured to only return codes that are valid for a given name. - You can set the name to be returned, the channels to be searched, the length of the returned code. - You can set various other options related to the source code. - You can set your nick to be returned. - You can set your nick so that it does not match any name, so that it shows up in the output of "whois -r". - You can set your nick to return any name, so that it shows up in the output of "whois -r". - You can set your nick to only return valid names, and no names of any length. - You can set your nick to return a given name, and only when your own nickname contains that name. - You can set your nick to only return valid names. - You can set your nick to return only 1 name of any length. - You can set your nick to only return short names. - You can set your nick to automatically return the nick you have selected, or to be silent. - You can set your nickname to be returned. - You can set your nick to return only valid nicknames, and no nicknames of any length. - You can set your nick to return the nick you have selected, or to be silent. - You can set your nickname to be silent. - You can set your name to not be returned. - You can set your name to automatically return a nick

Code Squire allows you to enter codes into a Voodoo system by storing them in a list and allowing you to select them. When you're ready to use the codes, bring up the list again and select the ones you need. You can double-click on any code to copy it to the clipboard. From the menus, you can remove a code from the list or manually add a new one. A: Another option besides Code Squire is Code Monkey. Which puts your codes in the clipboard for easy copy and paste. A: If you have Mumble (voice chat) you can also use the talk plugin. Say, I want to input a code to enable voice chat for a name and if I have it just say: -vvvv Code Squire can learn the name of the channel, but with Mumble even if you did the same you'd only get the channel name in the mib, so you'd have to use the "talk" command to send your message. I'm not saying it is a bad solution, I just really like Code Monkey due to usability and that you can enter many complex codes which you can save to your file, which you can look up at any time on your phone. I remember when I was very young, watching an episode of T.V. called "Ernie." Ernie was a rabbit with a mop on his head. In that episode he made a friend and unfortunately it was round and then his friend became really creepy. There was a song called "Ernie's Song" on the TV show. It was a sad song, but it kept asking this question: "Where is Ernie?" And I remember feeling really sad. It was only a Disney cartoon, but I thought the question "Where is Ernie?" was just so sad. I don't know why. I think art is important, because we have to work together as a world. Art is usually something that's made for people to relate and to feel for. I think that children have a lot of art inside of them, because they're just naturally good. They always have good ideas for their art. They're just like little miniature people with really big imaginations. I don't think that

What's New in the?

Code Squire is a free application for Voodoo. It captures and stores all codes it sees in any message sent to it on the Voodoo. Once activated, it constantly captures codes and stores them in a list in your task tray. You use it by bringing up the window and typing a name into the box. It will generate a list of all the codes that your name qualifies for. You can then double click on a code and copy it to the clipboard, or you can delete any code by hitting the x button. Voodoo Code Squire installs in the Voodoo menu, and it requires the Voodoo channel to work properly. It's Free for your use! New Update Added more codes Added text color for code Changed menu Fixed a bug Fixed a bug Fixed a bug Fixed a bug Fixed a bug Fixed a bug Fixed a bug LMG Editor version 0.3.11 * The mIRC client uses a plugin that you have to manually install * There are some more images than there used to be LMG Editor

allows you to edit the list of codes that you have entered on a given chat name, by displaying them on the screen. You can add new codes, edit codes, delete codes, and you can also copy and paste codes that you've entered. You can also create a list of codes that you want to get when a particular name is used, as well as generate a list of all your codes that match a given name. When you add a name, it will show you its previous code list, and you can add, edit, or delete codes from that list. LMG Editor Version 0.3.10 * Added code list options to the menu * Added code list options to the menu * Added "prefix" setting to the menu LMG Editor Version 0.3.9 * Added list options to the menu * Added list options to the menu LMG Editor Version 0.3.8 * Added the ability to create a list of all codes you've entered. * Added auto-complete text fields for code name and codes. * Added a check for duplicate names. LMG Editor Version 0.3.7 * Fixed display of new code list * Now expands vertically to show more code names. LMG Editor Version 0.3.6 * Added application shortcuts
