You can set your display preferences here. * **Snap tab:** The Snap tab controls how and when images are aligned on the page. * **Preview tab:** The Preview tab enables you to set the look of the preview window. * **Keys tab:** The Keys tab enables you to customize the keyboard shortcuts. For example, you can set a combination of keys to perform a common action, such as a single-key press to save a file. * **Window tab:** The Window tab controls how Photoshop displays the document window. There are three distinct stages in the life cycle of a forest: establishment, retention, and succession. We spend much of our time and energy on the first stage. This is characterized by the... Scientific terminology is important for understanding the processes of organic matter cycling in forests. It also helps us communicate information about these processes to others. Here are a few questions and the terms that go along with them. Why did I experience a leg cramp on this trail? What caused it? What was this leg cramp like? I'm sure you've experienced pain in your leg. It may be a bruised knee or swollen ankle. It's hard to miss the thick, soggy grass on the sides of the trails where we walk. What else do you notice out on the trails? Trail bushings are made from plastic or rubber. They are used to protect the surface of the trail from the abrasion that occurs from the weight of the bicycle tires. In the winter, many hikers use rams or walk/ride quads. Ram boots and front and rear suspension are designed to give better clearance and stability on slippery surfaces. Which comes first, the suspension or the boots? The term "flush" is a hint of its origin. It originates from flush-mounted post-and-rail fences, fences with a single post that support a bar between the rails. Knowledge is important to any gardener, but it's especially important for horticulturists. We need to know the structure of the plants we grow. In the following animation, we look at a large beech that is forming a conventional sprout, a bulbous-rooted stock that produces corms and, as the corms mature, stems. Where did they come from? That's what makes them different. The definition of a bog is a very wet, mucky soil.
